

Switch Class Documentation

Source File: Switch.h
Namespace: cap
Class Header: `class Switch : public Dev`

Overview

The *Switch* class is a *Dev* that accepts no inputs and can alternate its value between true and false.

Constructors

- `Switch()` (default constructor)
 - **Purpose:** Sets its value to false.
- `Switch(bool bit)`
 - **Purpose:** Sets its value to *bit*.
 - **Parameter(s):**
 - *bit*: Boolean.
- `Switch(const Switch& obj)` (copy constructor) [deleted]

Destructor

- `~Switch()` [virtual]
 - **Purpose:** Does nothing.

Assignment Operator

- `operator=(const Switch& rhs)` [deleted]

Member Functions

- `bind(Dev& obj)` [private]
- `unbind()` [private]
- `invert()`
 - **Purpose:** Inverts its value.
- `valid() const` [final]
 - **Purpose:** Returns true.
 - **Return:** Boolean.
- `output() const` [final]
 - **Purpose:** Returns its value.
 - **Return:** Boolean.
- `toString() const` [final]
 - **Purpose:** Returns "T" if its value is true or "F" if its value is false.
 - **Return:** String.
